TITLE : CONTAINER WITH LABEL AND
 MANUFACTURE METHOD THEREFOR

ABSTRACT : PURPOSE: To obtain a container with label of which handle part does not protrude from the container main body when not being used by a method wherein a label having a handle part is adhered to a container, and either on the adhered part of this label to the container, and either on the adhered part of this label to the container or on the container itself, the handle part is removably adhered.

CONSTITUTION: A label 1 made of a hard to tear paper has an adhering part 3 to be adhered unremovably to a plastic bottle 2 and a handle part 4 which is removed from the adhering part 3 and stood, and between the adhering part 3 and handle part 4, a fold line 5 is provided. These labels 1 are adhered on confronted side walls of the plastic bottle 2, and the end part which is away from the fold line 5 of the handle part 4 is made to be squeeze-out part 6 which is unremovably adhered to the plastic bottle 2. Between the squeeze-out part 6 and handle part 4, a stitch 7 is provided. The handle part 4 and the adhering part 3 are removably joined. The handle part 4 is removed from the adhering part 3 by cutting the stitch 7, and stood. Therefore, forming a handle on a container is very easy, and at the same time, since the handle part does not protrude from the container main body, the storage capacity of the container can be made smaller.
